We design.

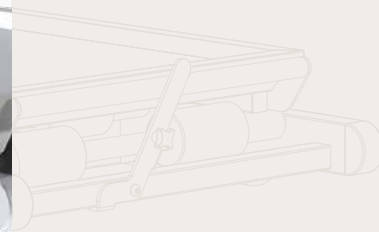

We manufacture.

We create new products.

Sova are manufacturers of mortuary and funeral home equipment. We specialise in the design of custom products and complete mortuary fit outs to suit individual requirements.

dignity in motion

Dedicated design.
Seamless movement.
Pride in our products.

Design

Our products are designed and manufactured in-house for the specific needs of the mortuary industry.

All equipment is designed to facilitate the seamless movement of cadavers within mortuaries from racks to preparation areas and into vehicles. The day-to-day processes, functional needs and flow within the mortuary are taken into account to produce equipment that simplifies manual tasking.

All products are designed and manufactured to high technical standards to streamline manual handling and improve occupational health and safety. We have a standard range, which has been refined to accommodate the most common requests and sizes, or fully customised and engineered options to cater for individual needs. Our products are designed around ergonomic principles that make lifting and transportation as safe as possible.

We can design new products around existing equipment in your facility, providing economic options where viable. Good design doesn't have to be expensive.

Australian made.
Precision built.
Engineered to last.

Manufacture

All products are fabricated on site at our factory to our stringent standards.

Materials and finishes are chosen for specific applications, and only the best quality electronic and manual components are selected to ensure longevity. The use of high-grade stainless steel and meticulous welding results in products that combine durability and precision.

Equipment from both our customised and standard range is fabricated using our in-house 3D printers, metal fabricators, welders, assemblers and testing technicians. All processes from metal preparation and welding to plastic injection and powder coating are carefully supervised. Products then go through the final steps of our quality control procedures prior to commission.

Our team is critical to this process. Highly skilled and professional, they are committed to the manufacture of the highest quality products.

Dressing trolleys

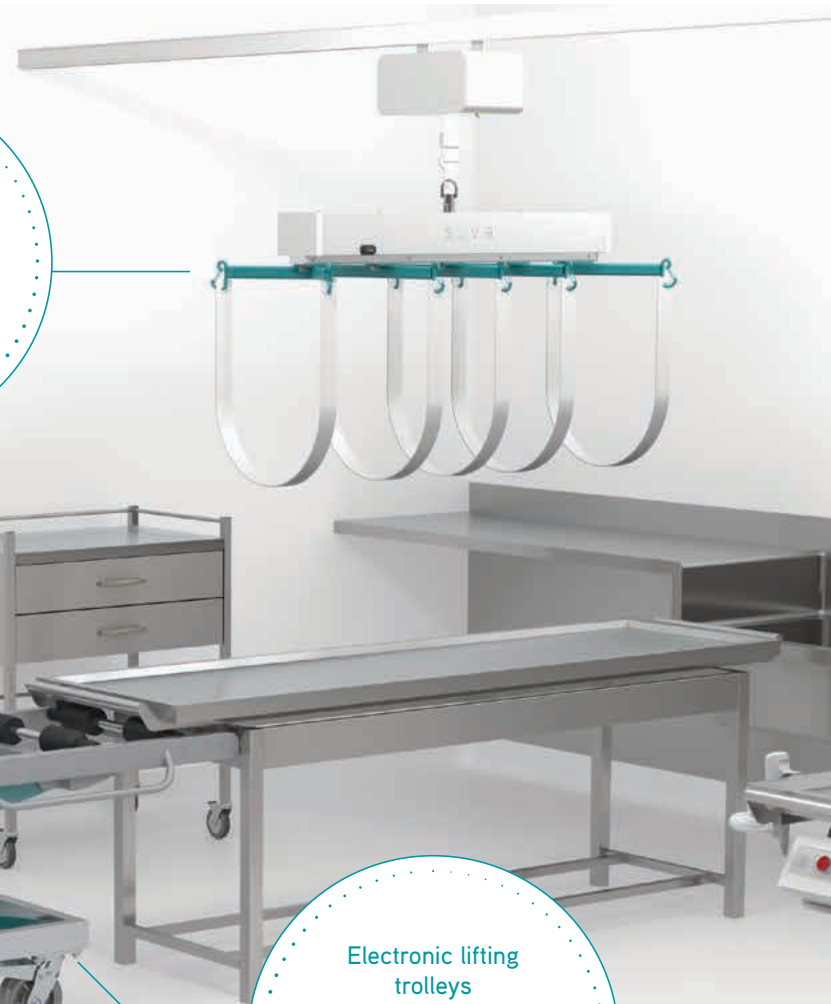

Made from high quality stainless steel with smooth surfaces and precision welding. Available in a range of styles and sizes.

Hoists

Specifically designed for lifting and transporting cadavers. No physical lifting, no risk of operator strain.

Electronic lifting trolleys

For the specific transportation requirements of mortuaries. The trolley bears the load, not the operator.

Benches

Stainless steel benches that sit independently or are built into the wall. Standard or custom, your choice.

Custom built.
Carefully considered.
Cleverly designed.

Custom equipment

The design and manufacture of bespoke products for the mortuary industry is our business.

Quality and product durability are key to our design ethos. From the initial consultation with the client and first sketches through the development process to the final product, we ensure the highest standards are maintained at all times.

A holistic approach.
Customised.
Complete.

Custom fit outs

One of our specialties is in providing complete mortuary and cool room fit out solutions where the interior layout is designed from scratch and equipment custom built for that particular environment. The results are all-encompassing, integrated and fit-for-purpose.

This complete service involves layout design for the space so it best fits this function, creating plans and 3D imagery, and customised design with purpose-built equipment.

We also provide relevant advice to other professionals and supply 3D renderings for architects to incorporate into models.

Racking

For the easy and ergonomic loading of trays, coffins and caskets. A modular system for flexibility.

Trays

High quality, long lasting stainless steel trays with precision welding. Robust and rugged.

Trolleys

Mortuary, coffin and body trolleys that can be wheeled around as needed. Custom designed, carefully crafted.

Efficient equipment.
Longer life span.
State-of-the-art servicing.

Maintenance

No matter how well designed and built, all products need to be serviced and maintained to ensure equipment is in optimal working condition and, more importantly, to preserve a safe working environment.

As well as repairing equipment, we investigate ways of increasing lifespan to save you money. All work is conducted in accordance with the appropriate Australian and international standards.

Many of our products incorporate software that is occasionally upgraded to improve functionality. Regular maintenance allows these updates to be programmed into existing products and ensures they are kept in the best possible condition.

As part of the maintenance process, every change is recorded using our state-of-the-art asset management system. Hard copy records are provided, and information is uploaded for access through our cloud-based records system.

All work is undertaken in our fully equipped workshop, allowing you to maintain an efficient working environment.

Bariatric Products

Electronic lifting trolleys

Our coffin transfer trolleys and embalming/autopsy trolleys are designed to cater for the specific transportation requirements of mortuaries.

Durable, long lasting and built to our exacting standards, these trolleys are designed for many years of heavy use. All are engineered with electronic lifting systems that raise and lower the trolley to the individual height required so the trolley bears the load, not the operator.

Chapel trolleys

We have concealment trolleys and chapel trolleys where discretion is required. These trolleys share the same functionality as other lifting trolleys but have a clip-on 'skirt' that covers the inner workings of the trolley.

Our chapel trolleys are height-adjustable for optimal transfer of cadavers from mortuary to vehicle and crematorium. All trolleys are designed to be safe and easy for one person to operate independently.

Benches and trolleys

Our custom-designed benches and embalming trolleys provide an ergonomic solution for handling and loading cadavers within the mortuary.

Fabricating stainless steel benches that sit independently or are built into walls is one of our specialties. If our standard range doesn't suit, we can design custom products for your specific needs. This range of equipment is precision welded for a seamless result that also aids in infection control.

Racking

Our mortuary racking allows for easy and ergonomic loading of trays and caskets. Racking is designed for trays to slide in and out seamlessly so cadavers can be stored until required.

Unlike other similar products, our modular system allows for greater flexibility. Individual bays can be added or removed as required. These modular racks are robust, withstanding up to **350kg per bay**, and are flat-packed for easy transportation.

Hoists and safe handling

Our hoists and systems are specifically designed to lift and transport cadavers within the mortuary. The system is designed to avoid any physical lifting and manual handling, eliminating the risk of strain or injury to the operator. Where previously two people were required for cadaver transportation, our system allows a single person to undertake this task independently and safely.

Anchored to the ceiling, the lifting module can move throughout the cool room or mortuary without obstructing people or other equipment.

Smart design.
Seamless.
Smooth.

Custom build

If our standard range doesn't suit, we design and build custom products to fulfill your specific requirements. It's one of our specialties.

Please call us to discuss your individual needs. We'd love to hear from you.
